

Navigation and Ancillary Information Facility

The SPICE Story

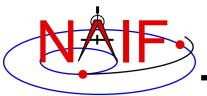

October 2022

Why Did NAIF Build SPICE?

Navigation and Ancillary Information Facility

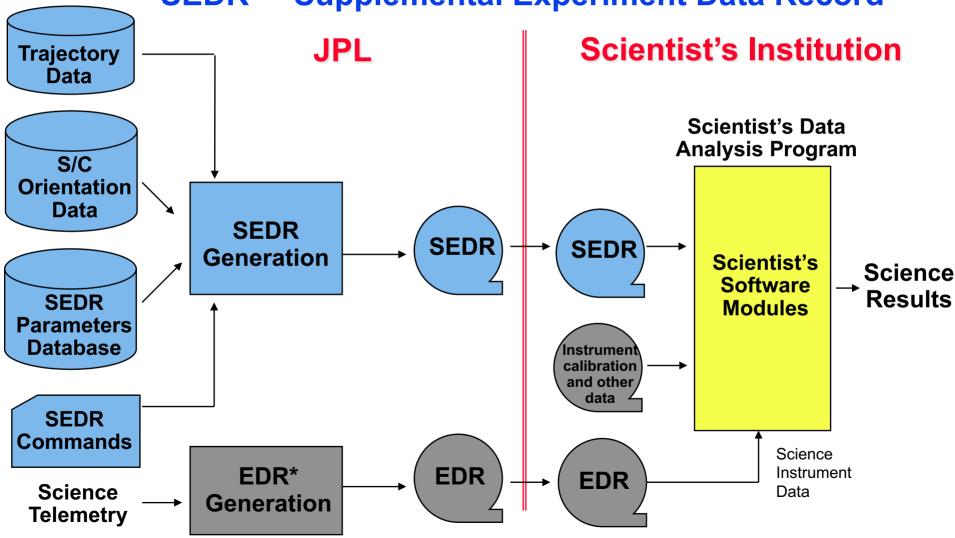

- Starting in the early 1980's scientists said they would like to:
 - use common observation geometry computation tools and methods throughout a project's lifecycle, and for all projects (national and international)
 - be able to produce custom observation geometry calculations themselves, whenever and however they want
 - understand the calculations and data used to produce observation geometry data
 - have the ability to revise the data and software tools used to produce their own observation geometry data

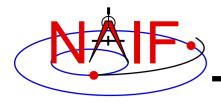

What Existed Prior to SPICE?

Navigation and Ancillary Information Facility

"SEDR" - Supplemental Experiment Data Record

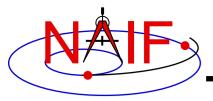

* EDR = Experiment Data Record = "raw" science instrument data

SEDR System Characteristics

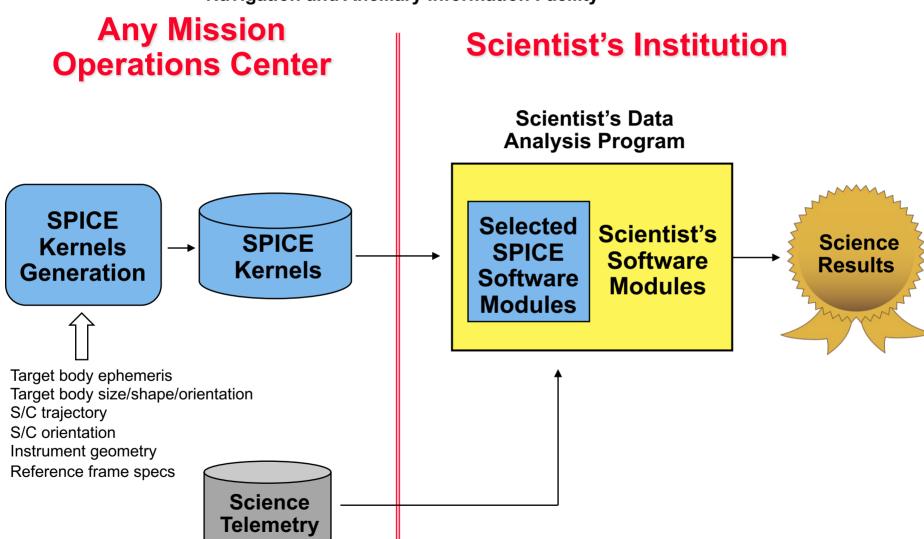

Navigation and Ancillary Information Facility

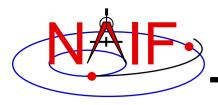

- The SEDR generation program was built and operated at JPL
 - Scientist's requirements on SEDR had to be provided long before launch
 - » Late or post-launch updates were hard/expensive to accommodate
 - Difficult to change WHAT gets computed
 - Difficult to change HOW items are computed (algorithms, parameters)
 - Difficult to change the TIMES at which items get computed
 - Generally only one SEDR file would be produced for each period of time
 - » Result: the scientist can't get better observation geometry data if/when better inputs (e.g. spacecraft trajectory or orientation, etc.) become available
 - SEDR generation was done "in the blind"
 - » Operators were not familiar with processes used to make the inputs
 - » Operators were not familiar with scientist's processing schemes
 - » Result: SEDR often did not fully meet science team's expectations
 - The SEDR system was not exportable to other institutions

The SPICE Idea

Navigation and Ancillary Information Facility

SPICE Benefits vs. SEDR

Navigation and Ancillary Information Facility

The customer has great flexibility in deciding:

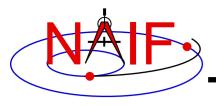

- what observation geometry parameters are computed
- at what times or at what frequency these parameters are computed
- for what time span(s) these parameters are computed
- electing if/when to re-do parameter computations using new (better) or otherwise different data as inputs

The customer also has:

- multi-mission tools and methods that can be reused on many tasks
- full visibility into algorithms and data used in geometry calculations

The flight project operations center can:

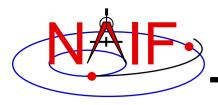

- concentrate on producing better ancillary data, rather than on producing lots of SEDRs and frequently updating the SEDR software
- The SPICE process may be replicated anywhere

SPICE "Challenges" vs. SEDR

Navigation and Ancillary Information Facility

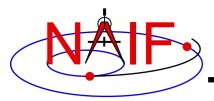

- There are often many SPICE data files produced by the mission
 - It can be a challenge to select the correct ones for a particular job
- Customers (usually) must do some non-trivial programming to read SPICE data and compute whatever is needed
- If the mission operations center is other than JPL, the appropriate project people need to learn how to produce and validate their SPICE data
- In some areas of SPICE, the offering of choices to allow correct handling of different situations may present complexity that is unwarranted for "simple" problems

SPICE Evolution

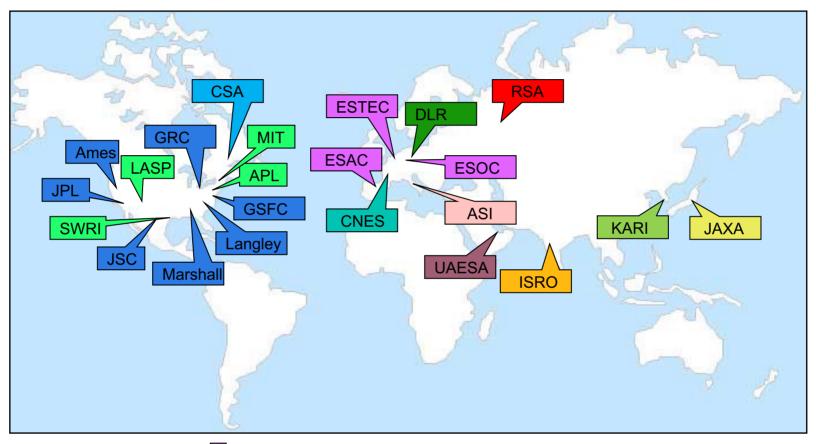

Navigation and Ancillary Information Facility

 At the behest of scientists, over many years the use of SPICE has grown throughout NASA and within space agencies and countries around the globe

Space Agencies Using SPICE

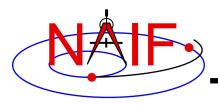

Navigation and Ancillary Information Facility

- NASA Field Centers
- U.S. Institutions
- Canadian Space Agency
- UAE Space Agency

- European Space Agency
- French Space Agency
- German Space Agency
 - Italian Space Agency

- Indian Space Research Organization
- Japan Aerospace Exploration Agency
- Russian Federal Space Agency
- Korean Aerospace Research Institute

SPICE Flight Project Users

Navigation and Ancillary Information Facility

Data Restorations	Selected Past Users	Current	Users
Apollo 15, 16 [L]	Magellan [L]	Mars Odyssey	Parker Solar Probe
fariner 2 [L]	Clementine (NRL)	Mars Reconnaissance Orbiter	Hubble Space Telescope [S][L]
Nariner 6 [L]	Mars Pathfinder	Mars Science Laboratory	James Webb Space Telescope [S][L]
fariner 7 [L]	NEAR	Juno	Lunar Gateway
lariner 9 [L]	Deep Space 1	MAVEN	Dragonfly
fariner 10 [L]	Galileo	SMAP (Earth Science)	IMAP
iking Orbiters [L]	Genesis	OSIRIS REx	MAIA
iking Landers [L]	Deep Impact	InSight	NEO Surveyor
ioneer 10/11/12 [L]	Stardust/NExT	Mars 2020	NEOWISE
aley armada [L]	Mars Global Surveyor	Europa Clipper	SPHEREx
hobos 2 [L] (RSA)	Phoenix	NISAR (NASA and ISRO)	SunRISE
lysses [L]	EPOXI	Psyche	TESS
oyagers [L]	GRAIL	Lucy	LunaH-Map (Arizona State)
unar Orbiter [L]	DAWN	Janus	Lunar IceCube (Moorehead State)
elios 1,2 [L]	Cassini Orbiter	Lunar Flashlight	GOLD (LASP, UCF) (Earth Science) [L]
Huygens Probe (ESA) [L]	Mars Exploration Rover	VERITAS	Emmirates Mars Mission (UAE via LASP
	Mars Express (ESA)	DAVINCI+	Armadillo (CubeSat, by UT)
	Venus Express (ESA)	JUICE (ESA)	ExoMars RSP (ESA, RSA)
	Rosetta (ESA)	Bepicolombo (ESA, JAXA)	Proba-3 (ESA)
	Mars 96 (RSA)	Korean Pathfinder Lunar Orbiter (KARI)	Solar Orbiter (ESA)
	Phobos Sample Return (RSA)	ExoMars 2016 (ESA, RSA)	Hera (ESA)
	Messenger	Akatsuki (JAXA)	EnVision (ESA)
	Chandrayaan-1 (ISRO)	New Horizons	Gaia (ESA)
	Hayabusa (JAXA)	Deep Space Network	INTEGRAL (ESA)
	Kaguya (JAXA)	Voyager	GEO satellites (EUMETSAT) [L]
	LCROSS	Lunar Reconnaissance Orbiter	MMX (JAXA)
	LADEE	Hayabusa-2 (JAXA)	SLIM (JAXA)
	Spitzer Space Telescope	DART	Aditya-L1 (ISRO)
	STEREO	NEA Scout	MOM (ISRO)
	Kepler	VIPER	Chandrayan-2 (ISRO)
[L] = limited use	ISO [S] (ESA)		Altius (Belgian earth science satellite)
[S] = special services	Smart-1 (ESA)		Spectrum-RG (RSA)
NAIF had, has, or will have NASA funding to sup	ling to support mission operations, consultation for fligh oport a foreign partner in SPICE deployment and archive sult with kernel producers. to consult on assembly of a SPICE PDS archive.
